SUMMARY

Flutter Engineer with 3 years of mobile experience, specializing in **cross-platform development**, domain-specific feature implementation, and sports-tech applications. Initially spent a year focused on **Python** development in sports diagnostics, building a **sport diagnostic system** and **code generation pipeline**, with additional **computer vision** work published at **IEEE STAR 2023**.

PROFESSIONAL EXPERIENCE

Full Stack Engineer, Ultrax *October 2023 - Present*

- **Co-developed** a cross-platform **Flutter** mobile application for sports management using **BLoC**, implementing domain-specific features with full ownership of mobile-side technical and architectural decisions
- Delivered domain-specific features spanning athlete performance tracking, event management, user administration, and notification services
- Implemented a **Mobile Design System** in Flutter, building reusable components and contributing to design decisions on appearance and behavior
- Collaborated closely with colleagues across mobile, backend, web, and QA teams throughout the development lifecycle
- **Mentoring** a student employee, providing technical guidance on Flutter development and code review

Software Developer, Ultrax *October 2022 - October 2023*

- Designed and built a sport diagnostic test automation system in **Python**, creating a spreadsheet-based test definition template and code generation pipeline using a DAG-based architecture to manage inter-test dependencies, enabling sports scientists to define new diagnostic tests without writing code
- Developed a computer vision pipeline using MediaPipe Pose and OpenCV to estimate athletes' jump height from standard video, tracking skeletal landmarks frame-by-frame and normalizing against real-world body height, published at **IEEE STAR 2023** as first author

EDUCATION

FER, Master's degree, Computer science *October 2021 - July 2023*

- Master's Thesis: Deep neural network architecture optimization with evolutionary algorithms
- Relevant courses: Machine Learning, Deep Learning, Evolutionary Computing Optimization

FER, Bachelor's degree, Computing *October 2018 - July 2021*

- Bachelor's Thesis: Task management application built with Java and Spring Boot

SKILLS

- **Mobile:** Flutter, Dart, BLoC, iOS & Android, cross-platform development
- **Other languages:** Python, Java, C/C++, JavaScript, SQL, PHP
- **Practices:** OOP, Git, CI/CD (GitHub Actions), code review, mentoring, AI-assisted development

ADDITIONAL INFORMATION

- **Languages:** Croatian (native), English (fluent)
- **Other:** Vice-president of PLK Galacticos, best Croatian powerlifting club in 2025
